Enhanced Effects Of Combined Cognitive Bias Modification improved functioning across a range of cognitive (global cognitive function, executive function, processing speed, memory, attention, mood, emotion, motivation, brain cortex, orientation), and physical (gait, balance, mobility) outcomes. [EPUB] Enhanced Effects Interventions which combined cognitive-physical training were comparable to those which isolated these same elements, in terms of their effects on executive function, processing speed, attention, mood, and cardiorespiratory fitness. Effectiveness of Combined Cognitive and Physical ... A combined positive CBM-I + C-CBT produced less negative interpretations of ambiguous situations than neutral CBM-I + C-CBT. The results also showed that both positive CBM-I + C-CBT and neutral CBM-I + C-CBT reduced social anxiety and cognitive distortions as well as improving work and social adjustment. Enhanced effects of combined cognitive bias modification ... Abstract: This study examines whether combined cognitive bias modification for interpretative biases (CBM-I) and computerised cognitive behaviour therapy (C-CBT) can produce enhanced positive effects on interpretation biases and social anxiety. Forty socially anxious students were randomly assigned into two condi- Enhanced effects of combined cognitive bias modification ... This indicates that adding positive CBM-I to C-CBT enhanced the training effects on social anxiety, cognitive distortions, and social and work adjustment compared to the

Results: Enhanced memory, increased neuronal density, decreased AChE activity and decreased oxidative stress status together with activated pERK1/2 were observed in the hippocampus of CP1-treated rats. These results suggested that CP1 might improve memory via enhanced cholinergic function and decreased neurodegeneration and oxidative stress. Neuroprotective and cognitive-enhancing effects of the ... RESULTS: Compared with the control group, the combined activity group showed significantly greater scores on the Mini-Mental State Examination (difference = 0.8 points, $P = .012$) and Wechsler Memory Scale-Revised-Logical Memory II (difference = 1.0, $P = .004$), significant improvements in mobility and the nonmemory domains and reduced left medial temporal lobe atrophy in amnesic mild cognitive impairment (Z-score difference = -31.3, $P < .05$). Effects of Combined Physical and Cognitive Exercises on ... Cognitive behavioral therapy (CBT) is a first-line intervention, yet the superiority of CBT compared with other behavioral treatments when combined with pharmacotherapy remains unclear. An understanding of the effects of combined CBT and pharmacotherapy will inform best-practice guidelines for treatment of SUD. Combined Pharmacotherapy and Cognitive Behavioral Therapy ... Galea, in Side Effects of Drugs Annual, 2011. Psychological. The cognitive effects of long-term opioid treatment for management of cancer pain has been reviewed, highlighting the paucity of studies and the fact that existing studies only showed minor cognitive deficits, such as reaction time, attention, balance, and memory. Cognitive impairment was also associated with dosage ... Cognitive Effect - an overview | ScienceDirect Topics Enhanced memory, increased neuronal density, decreased AChE activity and decreased oxidative stress status together with activated pERK1/2 were observed in the hippocampus of CP1-treated rats. These results suggested that CP1 might improve memory via enhanced cholinergic function and decreased neurodegeneration and oxidative stress. Neuroprotective and cognitive-enhancing effects of the ... cognitive, mild aerobic training, a combination of both, and book-reading activity. The results indicated that older adults who engaged in cognitive training (separate or combined training groups) showed significant improvement

in cognitive performance, compared to older adults who did not engage in cognitive training

Aim is to test the primary hypothesis that the combination of L-carnosine with cognitive training will significantly increase the performance of patients with schizophrenia on memory and learning training tasks compared to pairing cognitive training with placebo. Carnosine and Cognitive Training in Schizophrenia - Full ... The primary aim of this 24-week randomised controlled trial with a 24-week follow-up in community-dwelling older adults is to examine the effects of a multi-modal exercise program involving PRT combined with a protein-enriched diet achieved through lean red meat consumed three days per week (on training days) on skeletal muscle mass, size and strength, and cognitive function. The effects of a protein enriched diet with lean red meat ... AHN activation, combined with increased BDNF levels, pharmacologically ameliorates cognitive function in 5×FAD mice We next explored whether a late-stage increase in BDNF pharmacologically (AICAR), with increased AHN by P7C3 and LV-Wnt3, could also provide an effective therapeutic strategy comparable to that of sustained exercise in 5×FAD mice. Combined adult neurogenesis and BDNF mimic exercise ... Digital cognitive behavioral therapy (dCBT) has been available for over a decade. We reviewed the evidence that accumulated over the past 5 years and discuss the

implications for introducing dCBT into standard healthcare. Studies have consistently supported the use of dCBT to treat insomnia. Evidence is now demonstrating large short-term effects and smaller long-term effects up to 1.5 years ...
